

EXPERIMENT 6

Name: Aldrine Linjoe S

Roll No: 240701033

Simulate the lifecycle stages for UI design using the RAD model and develop a small interactive interface using Axure RP

AIM:

To simulate the lifecycle stages of UI design using the **RAD (Rapid Application Development)** model and develop a small interactive interface for a **Book Buying Application** using Axure RP.

TOOL USED:

Tool Link: <https://www.axure.com/>

THEORY:

Rapid Application Development (RAD) is a software development methodology that focuses on rapid prototyping, iterative design, and continuous user feedback instead of lengthy planning cycles.

The RAD model consists of four phases:

1. Requirements Planning
2. User Design
3. Construction
4. Cutover

PHASE 1: REQUIREMENTS PLANNING

1. Identification of Key Features

Navigation Modules:

- Home
- Book Categories
- Book Details
- Cart
- Checkout
- Order Confirmation
- User Profile

User Actions:

- Browse books
- Search books/authors
- View book details
- Add books to cart
- Update cart quantity
- Place order
- View order confirmation

2. Requirements Document

1. View book categories
2. Browse books under each category
3. View detailed information about books
4. Add books to cart and modify quantity
5. Proceed to checkout and enter delivery details
6. Confirm and place order successfully

PHASE 2: USER DESIGN

In this phase, wireframes and prototypes were designed using Axure RP.

1. Project Creation

- A new project was created in Axure RP named “**Book Buying App Interface**”

2. Wireframes Designed

Splash Screen

- Displays app name **Book Haven**
- Includes welcome message

Home Page

- Search bar for books
- Featured books section
- Categories display

Categories Page

Displays categories such as:

- Fiction
- Non-Fiction
- Academic
- Self Help
- Novels
- Comics

Book Details Page

- Book cover image
- Author name

- Price
- Description
- Add to Cart button

Cart Page

- Selected books displayed
- Quantity controls
- Total amount
- Proceed button

Checkout Page

- Delivery address
- Payment options
- Place Order button

Order Confirmation Page

- Displays order placed successfully message

3. Interactions Added

Navigation created using OnClick events:

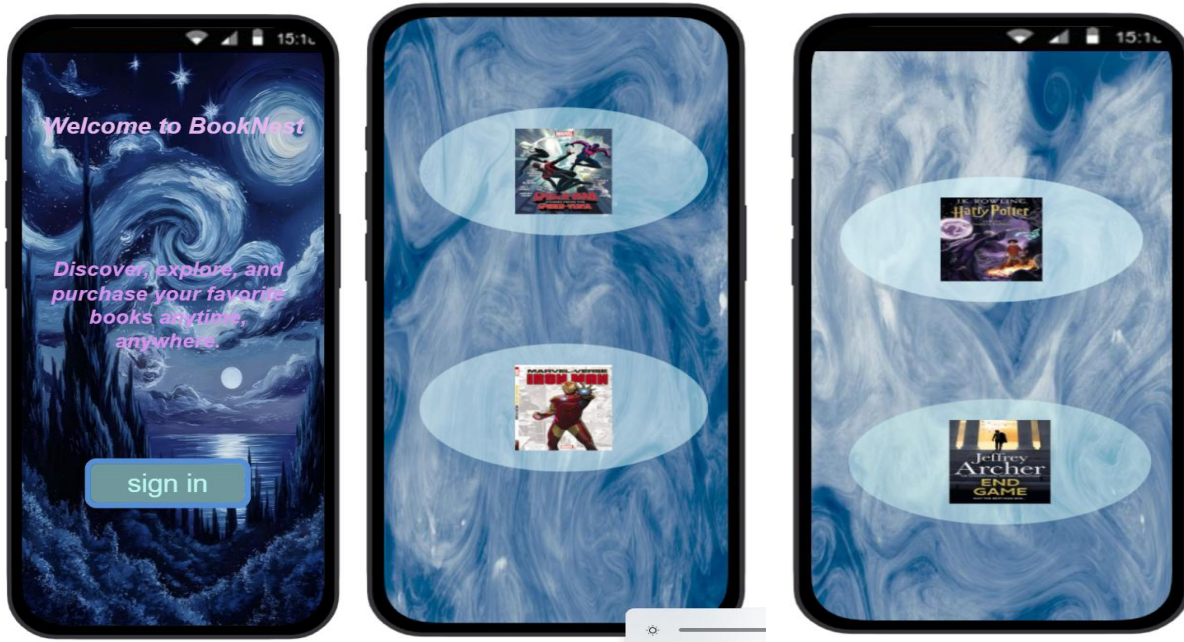

- Home → Categories
- Categories → Book Details
- Book Details → Cart
- Cart → Checkout
- Checkout → Order Confirmation

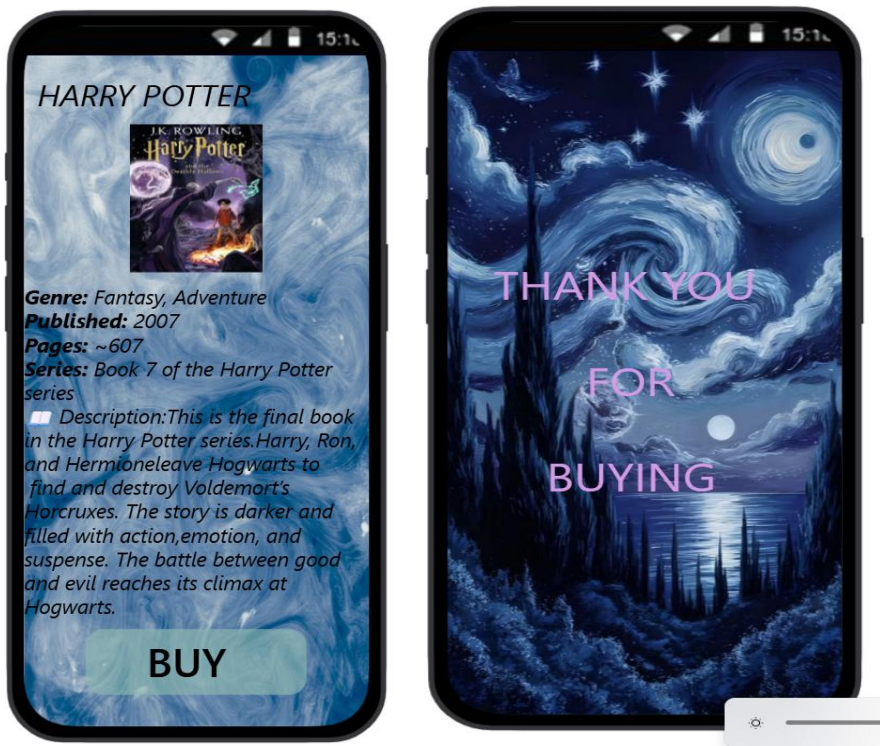

4. Reusable Components

- Common header reused
- Navigation bar reused
- Consistent button styles maintained

5. Annotations

- Notes added to explain UI elements
- Button interactions documented

PHASE 3: CONSTRUCTION

1. Interactive Prototype Development

Wireframes converted into interactive prototype.

Navigation flow:

Home → Categories → Book Details → Cart → Checkout → Order Confirmation

2. Dynamic Elements

- Add to Cart simulation
- Quantity increment/decrement
- Page transitions added

3. Testing and Iteration

- Prototype tested using Axure Preview
- Alignment issues corrected
- UI improved based on usability testing

PHASE 4: CUTOVER

1. Finalization and Export

- Prototype finalized in Axure RP
- Exported as HTML prototype
- Ready for demonstration

2. User Training and Support

- Prototype walkthrough provided
- User flow explained
- Documentation prepared
