

EXPERIMENT NO: 9

NAME: ALDRINE LINJOE S

ROLL NO: 240701033

AIM: The aim is to design a registration form that validates data such as name, age, and passwords, and displays error messages using HTML/CSS and JavaScript.

PROCEDURE:

Step 1: Setting Up the HTML Form Create an HTML structure for a "Registration Form" containing input fields for Name, Age, Password, and Confirm Password.

HTML (index.html):

HTML

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <title>Student Registration Form</title>

    <link rel="stylesheet" href="style.css">

</head>

<body>

    <div class="container">

        <h2>Registration Form</h2>

        <input type="text" id="name" placeholder="Enter Name">

<div id="nameError" class="error"></div>

        <input type="number" id="age" placeholder="Enter Age">

<div id="ageError" class="error"></div>
```

```

    <input type="password" id="password" placeholder="Enter Password">

<div id="passError" class="error"></div>

    <input type="password" id="confirmPassword" placeholder="Confirm Password">    <div
id="confirmError" class="error"></div>

    <button onclick="validateForm()">Register</button>

    <div id="successMsg" class="success"></div>

</div>

<script src="script.js"></script>

</body>

</html>

```

Step 2: Styling the Form with CSS Apply styling to center the form, define the layout of the container, and style error/success messages.

CSS (style.css): CSS

```

body {  font-family: Arial, sans-serif;  background: linear-
gradient(to right, #74ebd5, #ACB6E5);  display: flex;
justify-content: center;  align-items: center;  height: 100vh;
}

.container
{  background: #ffffff;
padding: 25px;  border-
radius: 10px;  width:
320px;  box-shadow: 0
4px 12px rgba(0, 0, 0,
0.2);
}

```

```
.error { color:
red; font-size:
12px;
}

.success { color:
green; text-align:
center; margin-
top: 10px; font-
weight: bold;
}
```

Step 3: Adding JavaScript for Validation Write a script to check if the name is empty, ensure the age is 18+, verify password length, and ensure passwords match.

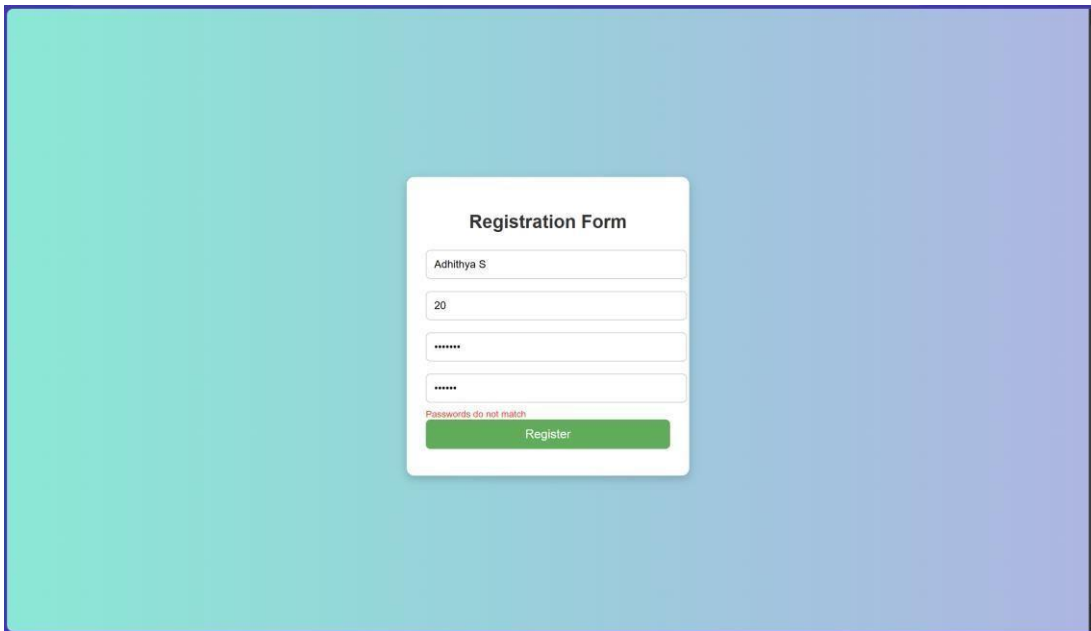

```
JavaScript (script.js): JavaScript function validateForm() { let name =
document.getElementById("name").value; let age =
document.getElementById("age").value; let password =
document.getElementById("password").value; let confirmPassword =
document.getElementById("confirmPassword").value; let valid = true;

// Clear previous messages document.getElementById("nameError").innerText =
""; document.getElementById("ageError").innerText = "";
document.getElementById("passError").innerText = "";
document.getElementById("confirmError").innerText = ""; if (name.trim() === "")
{ document.getElementById("nameError").innerText = "Enter valid name";
valid = false;
}

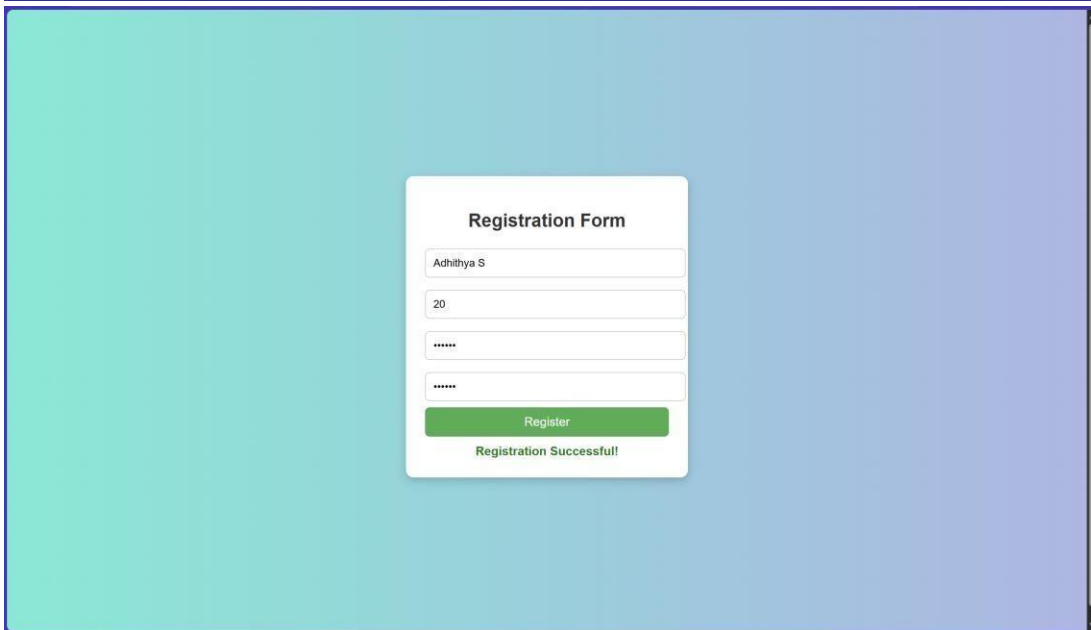

if (age === "" || age < 18)
{ document.getElementById("ageError").innerText = "Age must be 18+";
valid = false;
}
```

```
    if (password.length < 6) {        document.getElementById("passError").innerText = "Password must
be at least 6 characters";        valid = false;
    }
    if (password !== confirmPassword)
{        document.getElementById("confirmError").innerText = "Passwords do not match";
valid = false;
    }
    if (valid) {
        document.getElementById("successMsg").innerText = "Registration Successful!";
    }
}
```

OUTPUT:

The image shows a web browser window with a registration form. The form is titled "Registration Form" and contains four input fields: a name field with "Adhithya S", an age field with "20", and two password fields, both containing "*****". Below the password fields, a red error message reads "Passwords do not match". At the bottom of the form is a green "Register" button.

The image shows the same web browser window with the registration form. The form is titled "Registration Form" and contains the same four input fields: a name field with "Adhithya S", an age field with "20", and two password fields, both containing "*****". Below the password fields, a green success message reads "Registration Successful!". The "Register" button is still present at the bottom of the form.

RESULT: The registration form was successfully designed and implemented with functional data validation for name, age, and passwords.
