USER INTERFACE DESIGN

BAD DESIGN:

GOOD DESIGN:

CUPCAKE

Strawberry

*" A cupcake a day keeps
the blues away "*

CUPCAKE

Chocolate

*" A cupcake a day keeps
the blues away "*

Bad Design – Key Problems

1. No visual consistency

- Different colours, fonts, and text styles for each note.
- Looks messy and unprofessional.

2. Poor alignment & spacing

- Cards are not properly aligned.
- Uneven gaps confuse the user's eyes.

3. Too many colours

- Excessive colour usage distracts from content.
- No clear hierarchy or priority.

4. Typography issues

- Mixed fonts (bold, cursive, stylised) reduce readability.

- Not accessible for all users.

5. Weak user experience (UX)

- Hard to read.
- User must “think” more → bad UX.

6. No design system

- Feels random, not scalable for real apps.
- Hard to maintain if features increase.

Good Design – Key Strengths

1. Strong consistency

- Same colour, shape, and style across all cards.
- Looks clean and professional.

2. Proper grid layout

- Clear rows and columns.
- Easy to scan and understand instantly.

3. Minimal & focused colour usage

- One primary colour = calm and modern.
- Content gets priority over decoration.

4. Readable typography

- Single font style.
- Clear contrast between title and content.

5. Better UX

- User understands the app in seconds.
- Less cognitive load.

6. Scalable design

- Easy to add more notes/features.
- Follows real-world app standards.
